Languages: English (Fluent), French (DELF B1), Hindi (Native)

Professional Summary

QA Lead with 10+ years of experience driving quality strategy, automation, and release reliability across SaaS, e-commerce, telecom, and insurance domains. Proven ability to build automation frameworks from scratch, scale testing across teams, and improve release stability through data-driven quality practices.

Hands-on experience testing AI-driven features (document classification, data extraction) with additional exposure to LLM validation and prompt testing.

Core Competencies

QA Strategy & Test Leadership, Test Automation, AI Testing (LLM validation, prompt testing – learning & applied), CI/CD Integration & Quality Gates, API & Contract Testing, Risk-Based Testing, Release Governance, Stakeholder Management, Cross-team Collaboration

Professional Experience

Qantev — QA Lead

Sep 2024 – Present | Paris, France

- Defined and executed QA strategy across multiple squads for insurance SaaS platform, driving quality and release excellence
- Built automation framework (Cypress UI + API) achieving 60–70% regression coverage and reducing manual effort by 40% via CI/CD
- Validated AI-driven features (document classification, data extraction, medical code search) via UI and API, ensuring accuracy, consistency, and data integrity across systems
- Performed end-to-end testing of AI workflows, identifying edge cases and improving reliability of data-driven outputs
- Established quality gates, metrics, and release criteria, reducing production defects and improving release stability
- Collaborated with leadership (including CEO), led shift-left practices, and mentored teams to strengthen quality ownership
- Ensured end-to-end validation of complex insurance workflows (medical & claims systems)

ManoMano — QA Engineer

Apr 2020 – Mar 2024 | Paris, France

- Delivered QA for high-scale e-commerce platform covering critical user journeys (search, checkout, payments, and product page)
- Built and maintained automation suites (CodeceptJS + API testing), improving regression reliability
- Increased automation coverage across E2E and API layers, reducing manual testing cycles
- Implemented API testing strategy using Postman/Newman for backend validation
- Collaborated across multiple teams in program-level initiatives impacting customer experience
- Reduced production defects through early validation and close collaboration with product & dev teams
- Validated complex workflows including order lifecycle, payment systems, and customer journeys

Altran (Aricent Technologies) — Senior Software Engineer

Jun 2019 – Jan 2020

- Managed QA team and coordinated testing activities across delivery teams, ensuring product quality and timely releases
- Delivered testing and automation support for telecom administration platforms
- Collaborated directly with Samsung client stakeholders to understand business requirements and ensure quality delivery aligned with expectations
- Coordinated with distributed teams and client stakeholders to ensure delivery quality

Sun Life Financial — Test Analyst

Feb 2018 – Jun 2019

- Worked in agile team with developers and product stakeholders to deliver quality features for insurance platforms
- Built automation framework from scratch using Selenium (Java) and Postman/Newman, improving regression coverage and test reliability for our domain
- Performed functional, integration, and regression testing for insurance systems

NIIT Technologies Ltd. — Senior Software Test Engineer

Nov 2014 – Jan 2018

- Worked on airline and gaming industry projects for clients including SITA and Caesars Entertainment
- Performed functional and regression testing for web-based platforms and business workflows
- Supported release validation and defect triage across environments

AI Testing Exploration Project

- Designed test scenarios for validating LLM outputs (accuracy, consistency, edge cases)
- Created prompt-based test cases including negative and boundary testing
- Evaluated AI responses using structured validation criteria
- Explored automation of AI test cases using APIs and Python-based approaches
- Studied hallucination detection, bias validation, and output consistency techniques

Skills & Tools

- **Automation:** Cypress, Selenium (Java), Playwright
- **API & Contract Testing:** Postman, Newman, Bruno, Pact, Microservices testing (API & integration testing)
- **AI Testing:** LLM validation, prompt testing
- **CI/CD:** Automated test integration, quality gates, release validation
- **Performance Testing:** k6
- **Test Management:** Jira, Xray, ALM / HP QC
- **Databases:** PostgreSQL, SQL, DBeaver, phpMyAdmin
- **Methodologies:** Agile (Scrum), BDD, Risk-Based Testing, Waterfall

Education

MCA — Guru Gobind Singh Indraprastha University | 2014

BCA — Guru Gobind Singh Indraprastha University | 2011
